BUSINESS CONCEPT OVERVIEW — ENTREPRENEURSHIP & DEVELOPMENT

What is HardwareNow?

HardwareNow is a dark-store delivery business for construction materials — cement, pipes, wiring, and fittings — reaching contractors and households in 30–45 minutes, with a credit line built for people who work on-site, not from a desk.

HOW IT WORKS SEE THE MARGINS

SCROLL

THE PROBLEM

A single missing pipe fitting can stall a full day of work.

Hardware retail in India runs the way it did decades ago — no delivery, no transparent pricing, and no credit. That gap costs contractors time and money every single week.

01

The Round Trip

A 30–60 minute detour to the nearest hardware shop, mid-project, just to buy one item.

02

No Credit, No Flexibility

Contractors pay cash upfront every time, straining cash flow on active sites.

03

Unorganized Pricing

Rates vary shop to shop, bargaining is expected, and there's no accountability.

HOW IT WORKS

with the materials that run out the fastest.

Step 01

Order on the App

Contractors and homeowners place an order for exactly what they need — no minimum bulk requirement.

Step 02

Dark Store Picks It

The nearest micro-warehouse, stocked with high-frequency SKUs, prepares the order immediately.

Step 03

Delivered to Site

Our fleet delivers directly to the construction site or doorstep within 30–45 minutes.

Step 04

Pay or Use Credit

Contractors can pay instantly or draw against a pre-approved weekly credit line.

India's hardware retail market is over 90% unorganized.

Rising construction activity, climbing labour costs, and growing smartphone adoption in Tier 2 and Tier 3 cities make this the right moment for a credit-enabled, technology-led hardware delivery model.

HardwareNow

REVENUE MODEL

15–18%

BLENDED MARGIN

WHAT WE STOCK

Curated for the materials that actually run out.

Not a full hardware store catalog — just the 20% of SKUs that cause 80% of urgent, mid-project runs. This focus is what keeps dark-store inventory small enough to be fast.

Cement & Aggregates

Bagged cement, sand, and basic construction aggregates.

Pipes & Fittings

PVC, CPVC pipes and joint fittings for plumbing work.

Wiring & Electrical

Tools & Fasteners

REVENUE & MARGINS

Where the profit actually comes from.

Product margin is the base layer — 10–25% depending on category, 15–18% blended. Illustrative per-category math on a typical order:

CATEGORY	COST PRICE	SELL PRICE	MARGIN
Cement (bulk, per bag)	₹380	₹432	**12%**
PVC Pipes & Fittings	₹220	₹275	**20%**
Wiring & Electrical	₹150	₹197	**24%**
Tools & Fasteners (small order)	₹90	₹120	**25%**
Blended Average	—	—	**15–18%**

Figures are illustrative, modeled from the BMC's stated 10–25% category range — not live sales data.

01 **Product Margin**

10–25% margin on hardware retail, blended average of 15–18% across categories.

03 **Credit & Float Income**

Interest earned on contractor credit lines — the real profit engine behind repeat usage.

04 **Priority Subscriptions**

Monthly plans for contractors who want guaranteed fastest delivery slots.

Why This Wins Where Quick-Commerce Can't

Bulky, low-margin-per-volume items like cement and pipes don't fit Blinkit or Zepto's delivery economics — they structurally avoid this category. That leaves a real, defensible gap. Combined with a contractor credit line that creates genuine switching cost, HardwareNow builds loyalty that's difficult for a new entrant to break.

One line summary.

Dark-store hardware delivery, 30–45 minutes, 15–18% blended margin, with a contractor credit line as the real retention engine.

HardwareNow

REVENUE MODEL

HardwareNow

Instant hardware and construction supplies delivery, built for contractors and households in Tier 2 and Tier 3 cities across India.
